

Selenium End-to-End Testing Report

Name: Nebiyu Yohannes

Student ID: ATE/3973/14

1. Website Chosen

URL: <https://the-internet.herokuapp.com/login>

Reason: It is a well-known demo environment specifically built for testing. The login page provides clear inputs, deterministic success and error states (via flash messages), making it an ideal candidate for verifying locators, explicit waits, and parameterized inputs.

2. Design Technique for Data-Driven Test (T6)

Technique: Equivalence Partitioning

Partitions:

- Partition 1 (Valid): tomsmith -> Login succeeds, secure area message shown.
- Partition 2 (Invalid Username): invalid_user -> 'Your username is invalid!' error.
- Partition 3 (Invalid Password): wrong_pass -> 'Your password is invalid!' error.

3. Test Case Table

ID	Action	Input	Expected	Actual	Pass/Fail
T1	Load Page	N/A	Title 'The Internet'	Title 'The Internet'	Pass
T3	Positive Login	tomsmith / SuperSecret...	Secure area message	Secure area message	Pass
T4	Negative Login	invalid / wrong_pass	Invalid username error	Invalid username error	Pass
T6.1	Param Login 1	tomsmith / SuperSecret...	Success flash msg	Success flash msg	Pass
T6.2	Param Login 2	invalid_user	Invalid username flash	Invalid username flash	Pass
T6.3	Param Login 3	wrong_pass	Invalid password flash	Invalid password flash	Pass

4. Defects or Odd Behavior

No defects found. The site is a static demo, so behavior is entirely deterministic. The flash message element required an explicit wait to ensure it was fully visible before asserting its text.

5. Evidence of Run

Selenium End-to-End Testing Report

```
[INFO] Tests run: 6, Failures: 0, Errors: 0, Skipped: 0, Time elapsed: 23.90 s -- in edu.aau.selenium.SauceDemoTest
